

GOLF GREEN FILTER

When Installed the Access Hatch is Flush With the Turf

Internal Bypass Prevents Any Flow Obstruction

5 Year Warranty

As the ex-filtration system under the golf green drains away stormwater, it is channeled toward the Golf Green Filter. As the stormwater enters the Golf Green Filter it is dispersed across a bed of activated carbon and percolates down through the media. Once the stormwater passes through the absorbent media it exits the Golf Green Filter.

If the flow rate into the Golf Green Filter exceeds the flow rate through the Absorbent media, the water flow can bypass over the top of the media unimpeded.

Uses Oil Absorbing Polymers & Carbon Media to Absorb Contaminates
